Finance & Data Science

Amsterdam, The Netherlands | adit.natarajan2478@gmail.com | +31 6 83376771

I'm a Finance & Data Science student at Tilburg University, building on a BSc in Economics from Erasmus. What genuinely interests me is the intersection of quantitative methods and real financial decisions — whether that's understanding how investor sentiment moves markets, constructing portfolios, or using causal inference to cut through noisy data. I work primarily in R and Excel, and I'm comfortable taking a problem from raw data all the way through to a clear recommendation. I'm looking for an internship or junior analyst role where the analytical work is close to actual business decisions.

EDUCATION

MSc Finance (Data Science) — Tilburg University Sep 2025 – Oct 2026

- Financial Econometrics and Causal Inference — applied OLS, instrumental variables, difference-in-differences, and event studies in R on real financial datasets
- Machine Learning for Finance — built supervised and unsupervised models including tree-based methods; applied these to forecasting problems with real market data
- Portfolio Construction and Risk Management — implemented Mean-Variance and Black-Litterman frameworks; evaluated strategies on Sharpe ratio, drawdown, and tail-risk
- Sustainable Investing — analysed ESG screening approaches, climate-risk pricing, and green bond structures; compared sustainable and conventional portfolio performance

BSc International Economics & Business Economics (Finance) — Erasmus University Rotterdam 2022 – 2025

- Thesis: "How does investor sentiment influence stock market prices?" — independently designed and ran a regression and event study analysis in R, combining market return data with sentiment indices; graded distinction

SKILLS

Quantitative: Financial modelling, Valuation (DCF, CAPM), Portfolio optimisation, Risk and scenario analysis, Causal inference

Programming: R (tidyverse, ggplot2), Stata, SPSS

Tools: MS Excel (advanced), Power Query, pivot tables

Languages: English — C2 (native fluency), Tamil — C2 (native), Dutch — B1 (working knowledge)

PROJECTS & RESEARCH

Importance of CEO Capital in Firm Performance — MSc Thesis 2026

- Built a panel of 7,487 firm-year observations for S&P 500 firms (2000–2022) by merging Compustat, ExecuComp and BoardEx data from WRDS
- Constructed a composite CEO Capital Index from education, network size and international experience
- Ran panel regressions in R with year fixed effects and firm-clustered errors; found the index predicts firm value (Tobin's Q) but not profitability (ROA), with network size driving almost the entire effect

Obto — Social Workout-Tracking Web App (Personal Project) 2026

- Built and launched a full-stack web app (JavaScript, PostgreSQL/Supabase, Vercel) used by 5–6 active users to log workouts and plan gym sessions together
- Designed the database with row-level security so each user's data stays private and is shared only with accepted friends; added a shared calendar, session planning and training-volume analytics
- Shipped weekly releases driven by user feedback, covering bug fixes, UX redesigns and end-to-end browser tests

Investor Sentiment and Stock Prices — Bachelor Thesis 2024 – 2025

- Merged multiple data sources — CRSP market returns, Baker-Wurgler sentiment index, and news-based proxies — into a clean panel dataset; handled missing data and outliers systematically
- Found evidence of sentiment-driven return predictability in small-cap stocks during high-volatility periods;

presented findings clearly to a non-specialist panel

WORK EXPERIENCE

Store Operations Associate — Albert Heijn 2018 – 2019

- Managed stock accuracy and daily operational reporting for a busy department
- Learned to stay focused and reliable under real time pressure
